

Triple Threat Wheel Blasters - Driver and Passenger Side Set

Part Number: E-HP-208-A

Description: Set of Driver and Passenger Side Triple Threat Wheel Blasters Used for Cleaning Muddy Vehicles

Site Map:

Price: \$6,900.00

Detailed Description

The Triple Threat is a powerful addition to any car wash but it's especially effective for car washes located in areas that deal with spring and early summer mud season, rural and suburban areas with dirt and gravel roads, or washes that have a high volume of work and recreational trucks and 4x4s that spend more time in the dirt. The Triple Threats front, side, and rear-facing cleaning and rinsing power specifically targets vehicle sides, wheels, rims, and running boards to efficiently remove mud and road grime. They are made of stainless steel for longevity and durability. They feature three vertical manifolds spraying water out of them to increase efficiency for cleaning muddy vehicles. These come in sets of 2. One blaster is for the driver side and one blaster is for the passenger side of the vehicle in the wash cycle. It uses a double stack pump station in the backroom to provide adequate pressure to the two triple threat manifolds in the wash.

Below is our blog post about this:
