Detailed Description

Tommy Car Wash Systems' new Semi-Central Vacuum Producer Kit is a breakthrough in modern car wash service and operation. Specifically designed to address shortcomings in modern car wash vacuums including poor performance, low efficiency, high cost of maintenance, and high rate of failures and replacements, the Central Vacuum Producer dramatically improves the experience of both the user and operator by intelligently centralizing vacuum the vacuum producer and minimizing upkeep. Operation is extremely quiet as motors are located further away from the vacuum station, and the power delivered to the vacuum hoses remains consistent across all stations even during periods of maximum use. This improved power not only impresses customers but has a significant on the time it takes them to successfully vacuum out their vehicles, in turn increasing the producer's down-time and extending its already significant lifespan.

Specifications

Kit includes:

- Central Vacuum Turbine Pump
- Vacuum Pump Pressure Relief Valve
- Central Producer Mount Plate

Features

- Producer Lifetime Greater Than 40,000 Working Hours
- Powerful, Constant Suction
- Up to 40% Less Time Per Vehicle Vacuum Cleaning
- Minimal Maintenance Requirements
- Large Debris Collection Chamber, Empty Every 1,500 Cars
- Economical Design
- Controlled Energy Consumption, Approx. 2kW / 1 user, 24 kW / 16 users

Installation

[Semi-Central Vacuum Maintenance Procedures](#) [Semi-Central Vacuum 2016 Noise Study](#) Optional mufflers are available, sold separately.
